

AIRCLIC CONNECT2

With the increasing volume of business-critical information captured on mobile devices, companies need a fail-safe plan that will mitigate the risk of losing data or delaying transmission. Whether the situation is a wireless outage or lack of coverage, AirClic® Connect2™ ensures uninterrupted activity...and peace of mind.

Because interruptions are not an option

AirClic MP has always offered offline scanning and data input capabilities, automatically transmitting data as soon as the field worker returns to coverage. But with AirClic Connect2, you maintain 100 percent field visibility 100 percent of the time, regardless of coverage or wireless connection.

Whether the AirClic solution is part of your company's disaster recovery plan or your workers are frequently out of coverage, AirClic Connect2 guarantees that you will always get the information you need, when you need it. It's as easy as using your computer's internet connection to download the data from your mobile phone with a USB cable connection.

All information that was captured since the last successful transmission is immediately available to you, as if the handset user were out in the field with a functional wireless connection. AirClic Connect2 uses your internet connection instead of the wireless network for transmission. You can even log in and log out of the handset while using AirClic Connect2.

System requirements:

Handset requirements

- Motorola iDEN handset running AirClic MP Connect2 edition

PC requirements

- Windows 98 or higher
- AirClic Connect2 software
- Internet connection without a proxy server
- One free RS-232 Serial port or USB port

Equipment requirements

- RS-232 serial cable
- Option: Up to eight phones can transmit data through a single PC at one time. AirClic offers the required cables and optional serial-to-USB hub which connects the handsets to a single USB port on your PC.
